Debut PRO

"A carefully assembled instrument"

- Perceived **drive noise** transferred through the plinth **is minimal**.
- Reproduction is **precise** and **spectrally balanced.**
- Bass is precise and undistorted thanks to the suppressed sub-acoustic resonances.
- Great detail at the top end of the spectrum.
- The Pro-Ject Debut PRO turntable is a **good-looking**, **fully functional** and carefully assembled instrument from **a superb combination** of plinth, tone arm and bearing block.
